

Initial Medical Services: Online Monitoring System

Initial Medical Services is constantly looking for ways to improve its service to ensure it maintains regulatory compliance and remains Europe's leading clinical and dental waste management company.

One example of this innovation is MyMediTrack, an online web-based system that shows complete service transparency.

MyMediTrack allows all medical service documentation and information to be available instantly to customers.

Customers receive accurate waste transfer documentation and up-to-date service management information because each technician is equipped with

a hand-held computer allowing them to make quick and accurate records of all clinical waste collections.

MyMediTrack is easy and safe to use. It offers each customer their own password protected access to:

- online management information
- service locations
- contract details
- records of visits with proof of delivery signatures

- ability to download service details in Excel or PDF formats

And because Initial Medical Services is aware that each customer will have their own requirements for clinical waste management, it provides a free, personalised quotation.

Initial Medical Services operates across the UK and continental Europe.
